## High-Speed Uncooled Infrared Line Camera

The infrared line cameras **PYROLINE** allow you high-speed non-contact measurement of temperature profiles.

The cameras are specially designed for long-term use in fixed-mounted applications. For general purpose use the spectral ranges from 8  $\mu\text{m}$  to 14  $\mu\text{m}$  and 3  $\mu\text{m}$  to 5  $\mu\text{m}$  are available. The spectral ranges from 4.8  $\mu\text{m}$  to 5.2  $\mu\text{m}$  (which is particularly suitable for the measurement of temperature profiles in glass) and 0.8  $\mu\text{m}$  to 1.1  $\mu\text{m}$  (for metal) are for special applications.

With an uncooled infrared linear array (128, 256 or 512 pixels) you can realize non-contact measurement with 256 lines per second (512 lines per second optional) in temperature ranges from 0 °C to 3000 °C. The high-speed version PYROLINE HS 512N even provides 2000 lines per second. The camera has an aluminium compact-housing (IP54) or in a stainless steel industry protection housing IP65. More housing variants are available.

Different lenses with a field of view up to 90° are available. Measurement results can be transferred to your computer with real-time data transmission via fast ethernet with up to 2000 lines per second. Stand-alone operation without computer is possible too. Alarm and thresholding monitoring as well as triggered measurements are practicable.

We grant you 2 years warranty and customized system solutions with modified hardware and software.

### Advantages of line cameras compared to line scanners:

- no opto mechanical Scanner
- high measurement speed up to 2000 lines/second
- use of uncooled infrared sensor arrays
- simultaneous measurement of all measurement points

## Software

The powerful online software **PYROSOFT** for Windows® allows you to control the infrared line camera **PYROLINE**. Recording, viewing, manipulation and storage of the measured data are possible as well.

Special features are:

- real-time data recording
- definition of zones and monitoring of alarm thresholds
- analysis of trends
- data export (text, bitmap, video)
- process control via PROFIBUS, analog and digital inputs, outputs and other interfaces

A programming interface (Windows® DLL) is available for system integration.

## Connectors

### Ethernet (LAN)

- Infrared data in real-time with up to 2000 lines per second (TCP/UDP)
- Web interface (status and image bar)
- PYROSOFT software
- Configuration for stand-alone operation

- ➔ Power supply
- ➔ Trigger 1
- ➔ Trigger 2

### Inputs

- Error signal/
- Alarm 1 ➔
- Synch signal/
- Alarm 2 ➔

### Outputs
